

TVN LIVE PRODUCTION presents TVN-Ü8UHD at IBC 2024

September 2024: TVN LIVE PRODUCTION has put its eighth OB van into operation. The TVN-Ü8UHD made its production debut at the UEFA EURO 2024 football championship, including the closing ceremony at the final in Berlin. The vehicle and its concept will now be presented to the public at the IBC 2024 trade fair in Amsterdam.

The TVN-Ü8UHD is the most powerful OB van on the market. It is designed for demanding large-scale broadcasts with the need for multiple directing areas, for the production of independent, parallel signals to be globally contributed.

„With the TVN-Ü8UHD, we are once again expanding our fleet upwards and thus meeting the increasing requirements of our customers for complex premium productions even better“, says TVN CEO Markus Osthaus.

The TVN fleet now consists of eight OB vans plus set-up vehicles and 13 SNG units. All vehicles follow a standardised architecture so that they can be networked to meet even the greatest requirements.

TVN's own engineers have once again contributed valuable, comprehensive expertise to the TVN-Ü8UHD. Above all, the production crews' decades of experience in the international live broadcasting of sports, show and society events are always incorporated into the design so that the mobile units are optimally aligned with the production processes and customer requirements. This has once again been achieved with the TVN-Ü8UHD.

TVN-Ü8UHD key features:

- UHD/HDR-capable, state-of-the-art broadcast technology with corresponding back-up systems
- parallel operation of UHD and HD
- 3 video & 2 audio directing areas | up to 2 edit suites
- 32 Sony UHD cameras as basic equipment
- 4 units of the latest Sony MLS-X1 switcher
- the world's most powerful Evertz SDI 12G router
- calibrated Dolby Atmos directing area

In building the TVN-Ü8UHD, TVN has once again cooperated with strong partners who share the high demand for the most innovative solutions. Together with ProjectBuilders (design), Carrosserie Akkermans (vehicle construction) and D&MS (cabling/system integration), TVN is presenting the TVN-Ü8UHD at the International Broadcasting Convention (IBC), one of the world's leading trade fairs for the broadcast sector, 13. – 16.09.24 in Amsterdam.
